## **IPsens Partners With Current, Powered By GE To Build Comprehensive Intelligent Environments To Reduce Energy Use**

**Branson, MO (November 17, 2016)**— IPSens announced today that it has partnered with Current, powered by GE (NYSE: GE) as part of Current’s partner ecosystem. Current, powered by GE is a digital startup that’s helping commercial and industrial customers optimize energy use and drive operational efficiency. IPSens is a parking software solution company that has provided enterprise-level parking management infrastructures which include best-in-breed hardware and state of the art software solutions for 41 years.

“We are proud to be partnering with GE on this important initiative,” said Gorm Tuxen, president of IPSens LLC. “The importance of energy efficiency stretches across industries, and parking technology can play a particularly important role. By helping to make parking management more efficient, and the parking experience more customer-oriented, parking technologies can significantly reduce the amount of time and energy that is required to operate parking facilities.”

### **About the IPSens Data Alliance**

IPsens provides a full suite of cloud hosted parking and traffic management solutions, based on data input from various sensors, counters, parking operations and 3<sup>rd</sup> party alliance member systems.

IPsens can be found online at [www.IPsens.net](http://www.IPsens.net)
